

PaySecure

We now offer PaySecure™, a new payment option that allows you to use your debit card and PIN to pay for online purchases. This new payment option provides extra security for your online debit card purchases, making it safe, reliable, and easy-to-use.

How does PaySecure™ work?

Simply use your debit card at any participating online merchant that displays the PaySecure™ logo. When you initiate payment for your purchase on the merchant's website, enter your debit card information as you normally would. A graphical PIN pad will appear at the online merchant checkout for the secure entry of your PIN. Enter each digit of your PIN on the PIN pad and click "Submit PIN." Once the transaction has been successfully processed, the PIN pad disappears and you will be returned to the payment confirmation page.

What are the benefits of PaySecure™?

PaySecure™ provides an extra layer of safety and security for your debit card transaction. Use of your debit card along with your PIN proves that you are making the purchase, since only you know your PIN. All you need is your debit card and PIN. Pay right at the merchant checkout. There's no redirection to another website for payment.
